

Drop-in-replacement ignition rails for MWM® engines

Applicable for (TEM) ZS ignition systems

Replacement without modifications

The special engineered Hatracco ignition rails for MWM® engines are a drop-in replacement for original MWM® ignition rails and are compatible with TEM ZS ignition units, which are originally Altronic.

This means; the original rail can be replaced without modifications. **No replacement** of ignition module and **no alteration** of the engine management system needed!

Drop-in replacement

Replacement for your current MWM® ignition rails **without modifications**.

Durable

The Hatracco designed MWM® ignition rails are of the highest quality, ensuring durability without needing foam. Not using foam prevents moisture build-up and corrosion frequently related to this type of insulation.

Serviceable & sustainable

Not using foam creates the possibility for small repairs if needed instead of a complete replacement of the ignition rail. This reduces waste and lowers your carbon footprint.

Increased value for money

Cost-effective

Due to the Hatracco ignition rails design, small repairs are possible if needed resulting in high serviceability and less waste. The competitively priced Hatracco ignition rails for MWM® engines combined with their high serviceability and less waste increases your value for money; maximization of your total cost of ownership.

One-stop-shop

Hatracco is the official certified service center worldwide for Altronic ignition systems and is the exclusive distributor for Altronic products in Europe. Hatracco makes custom ignition rail systems, extensive line of Sparkplug Cables, Teflon extensions and Cable Harnesses. In-house production provides short lead times and a high grade of flexibility with respect to quantities, sizes and configurations.

No minimum quantities required!
